- How we create Active x control
- How we can run Active x control

# Active x control

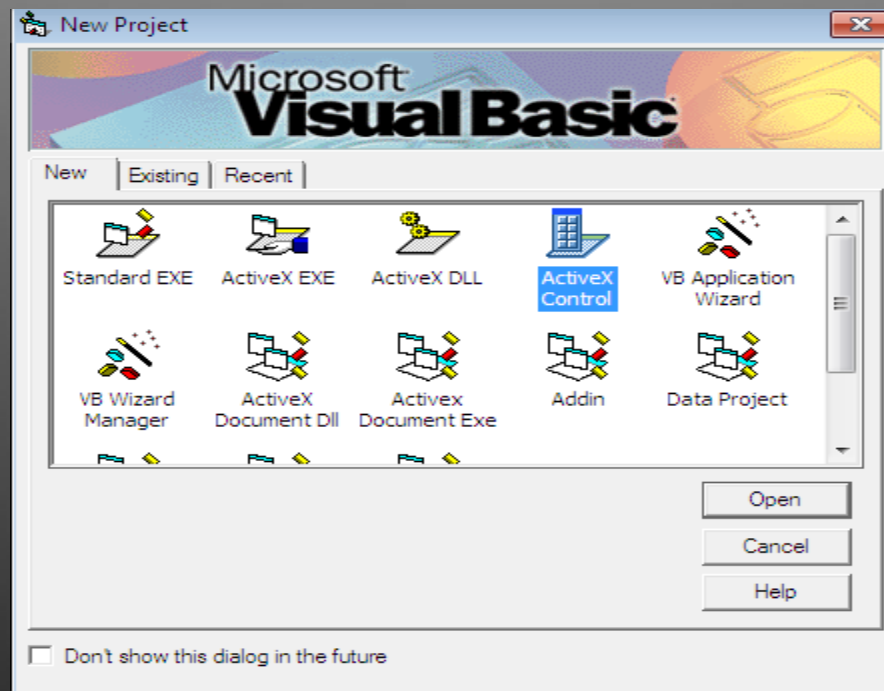

- ActiveX is a framework for defining reusable software components in a programming language independent way.

# Applications

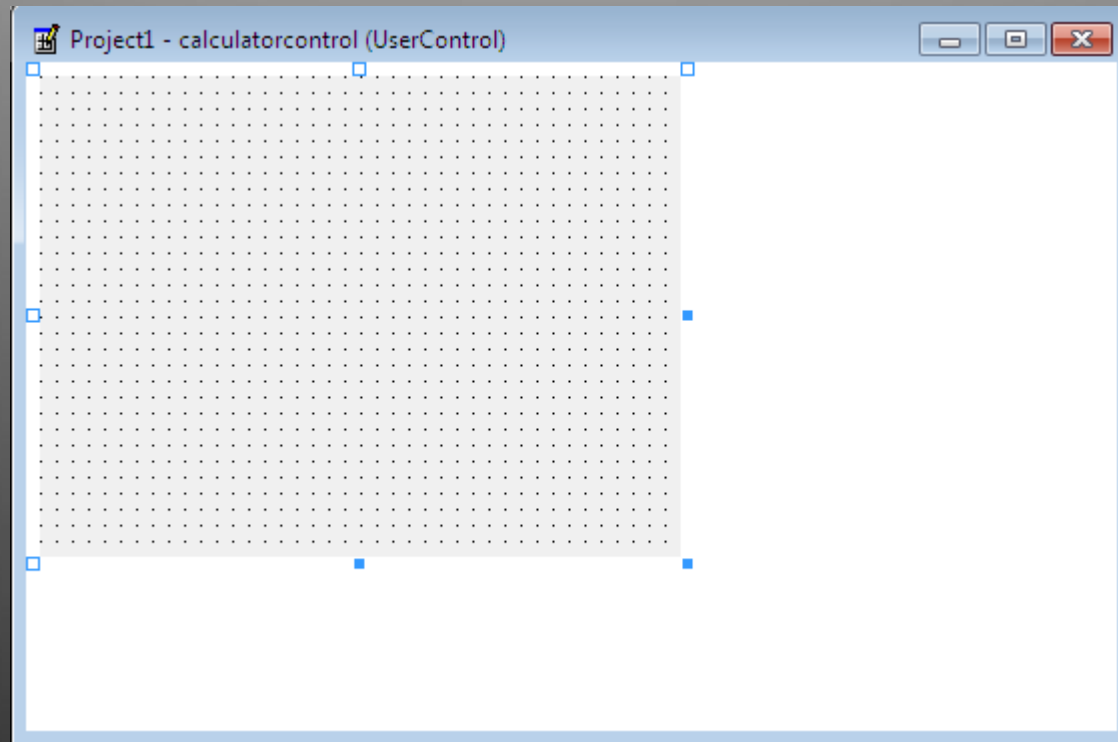

- Calculator For Addition
- System Clock

# Clock

- First we start the VB then this dialog box will appears then click on active x control.

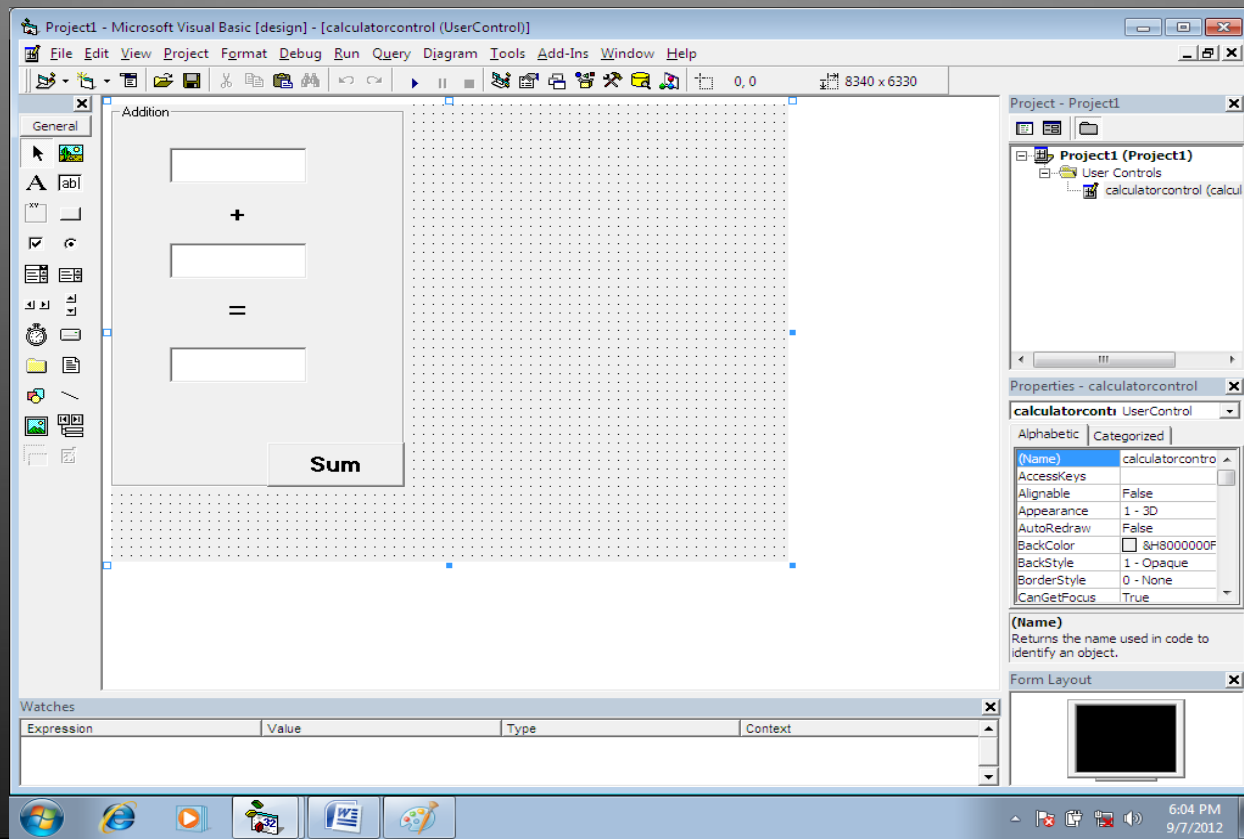

# This screen is open

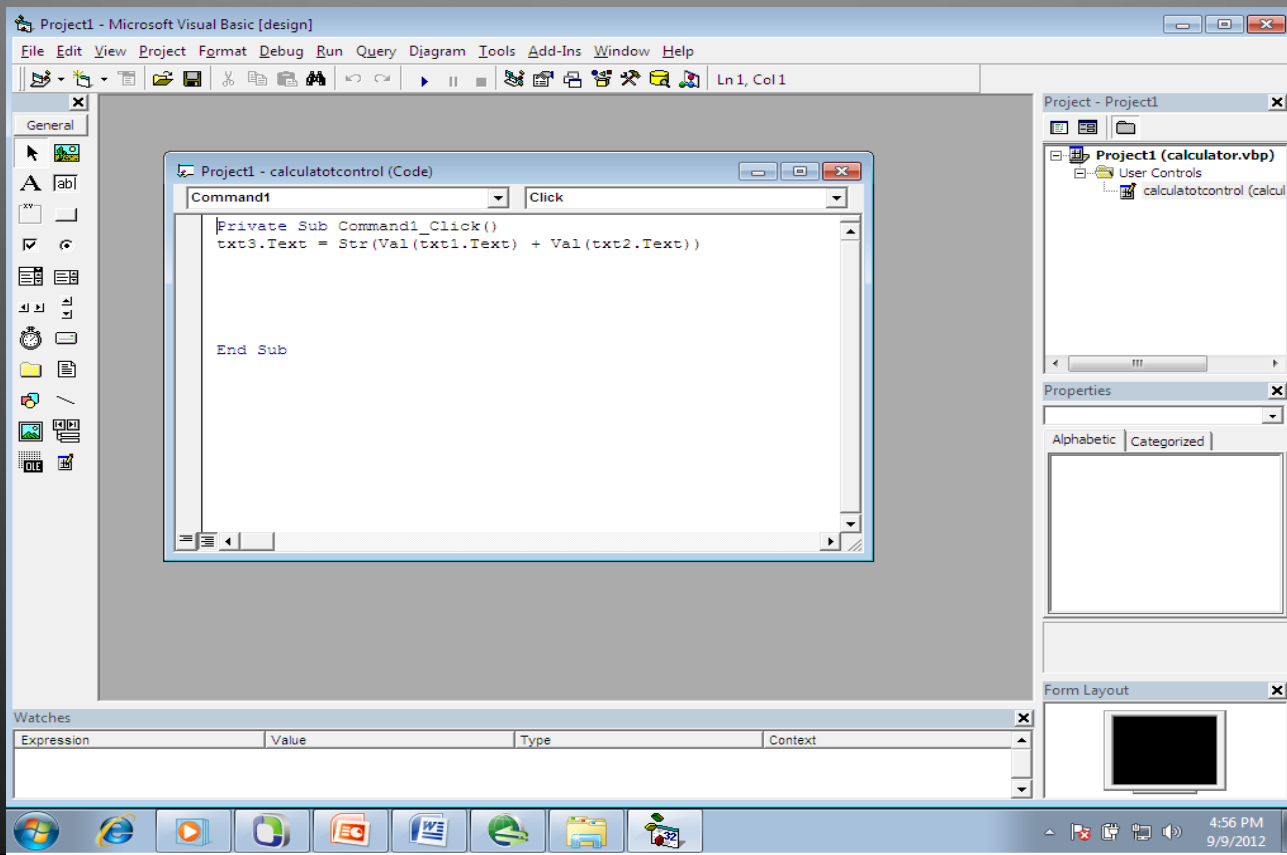

# Calculator

- Now we create a simple calculator for addition. Give the name to project is calculatorcontrol from property window.

# Calculator

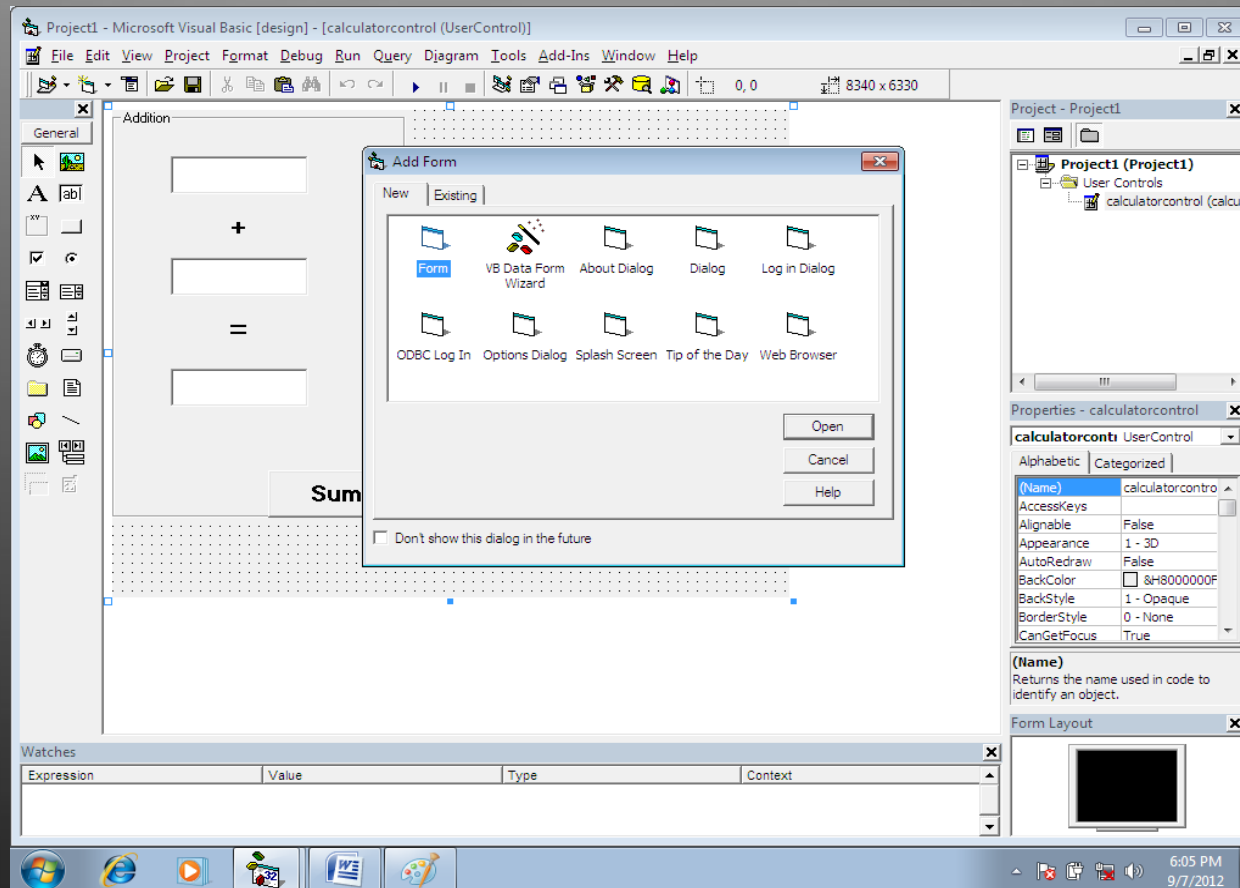

- Click on the command button(=) . Then coding window will open now we write the code is:

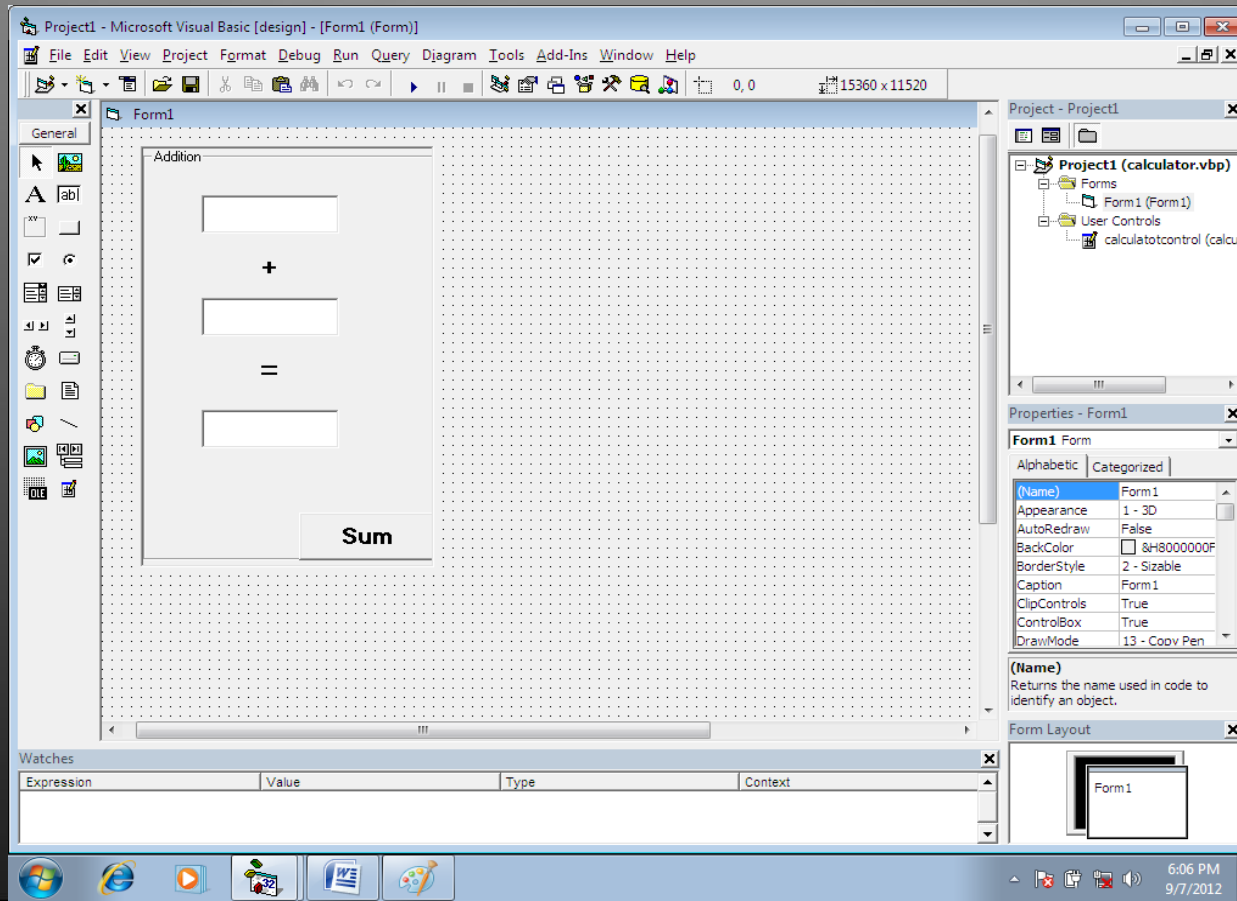

# Calculator

- Now click on project menu and add a form

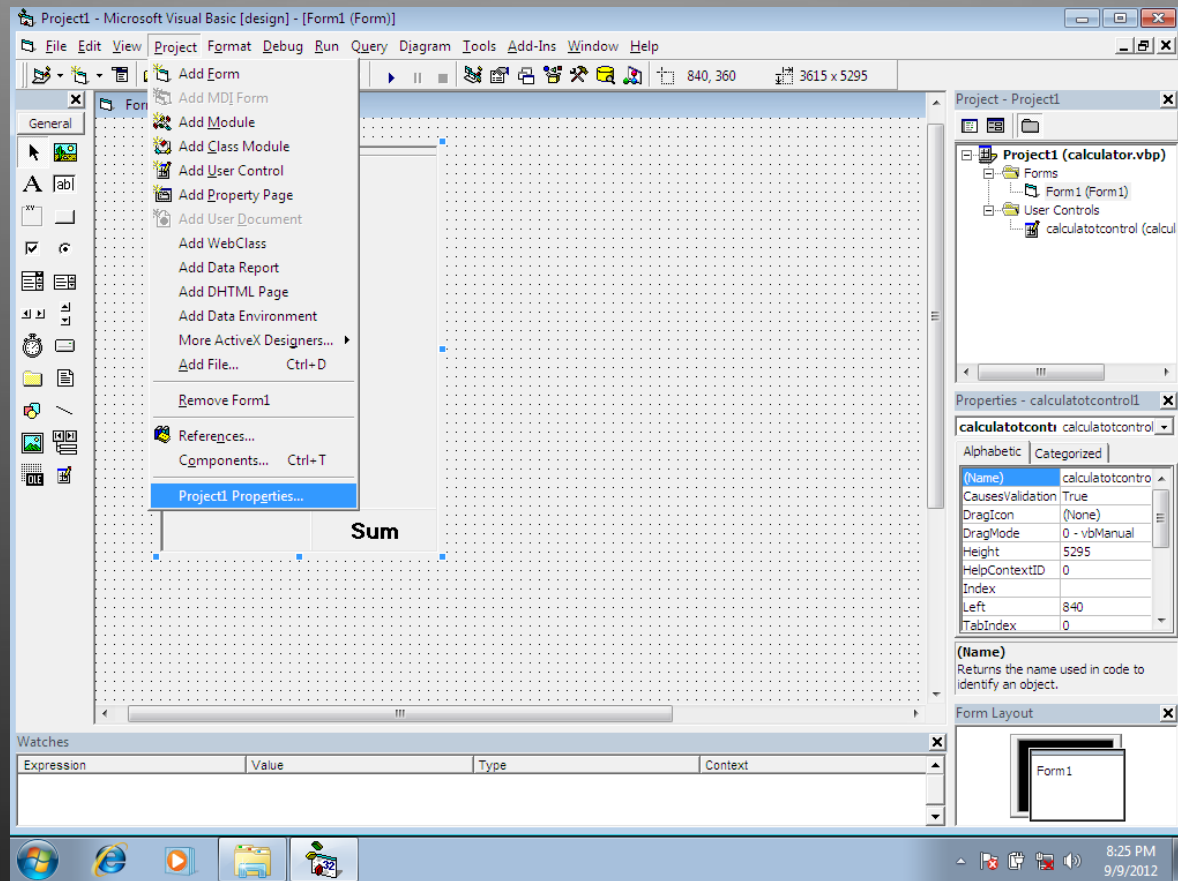

# Calculator

- Now component is alive in toolbox click on that component and drag on the screen.

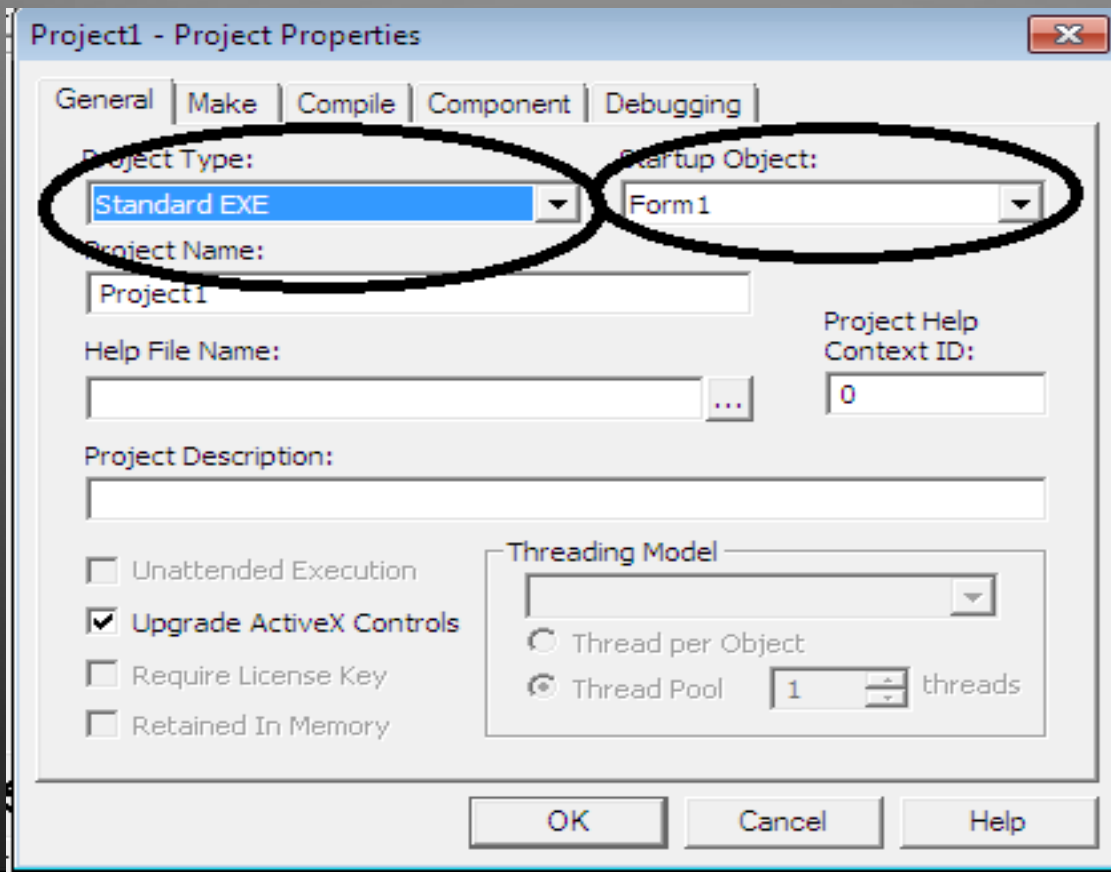

# Calculator

- Now we set the property for execution

# Clock

- Select standard EXE from project type form1 from startup project.

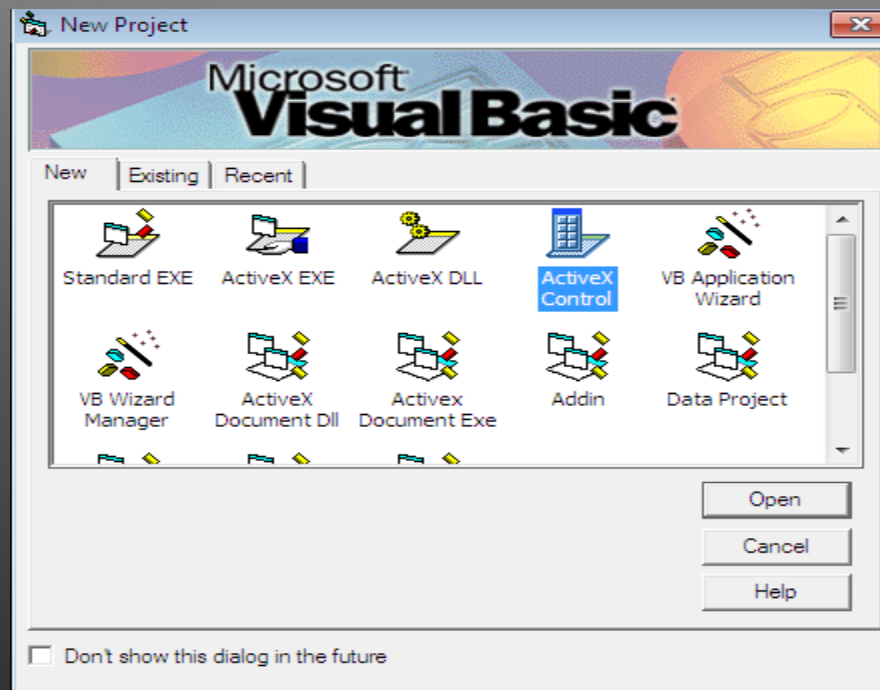

# Calculator

- Now execute it .

The screenshot shows a Windows application window titled "Form1". Inside the window, there is a section titled "Addition". This section contains a vertical sequence of elements: a text box with the number "20", a plus sign "+", another text box with the number "20", an equals sign "=", and a third text box with the number "40". At the bottom right of the "Addition" section, there is a button labeled "Sum".

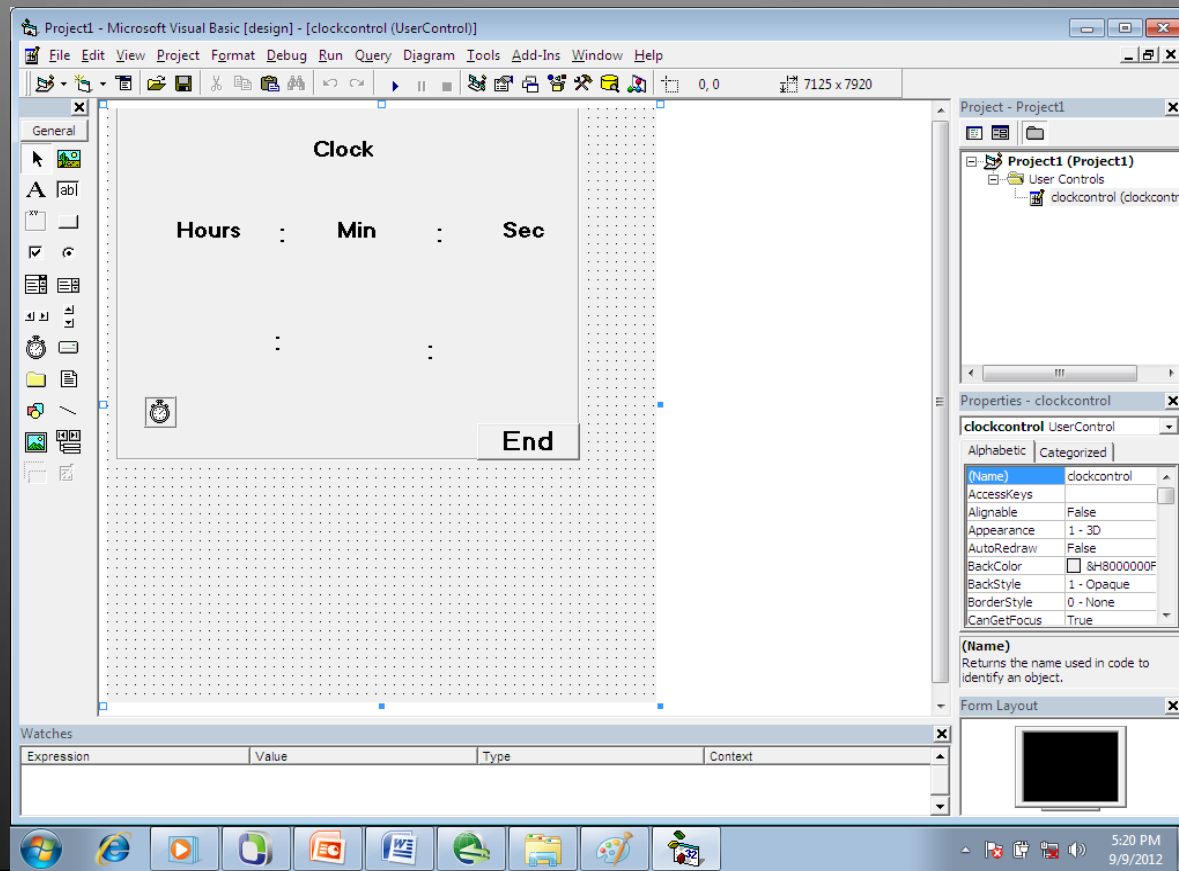

# Clock

- First we start the VB then this dialog box appears. click on active x control.

# Clock

- Now draw clock on it and give name clockcontrol to project from property window

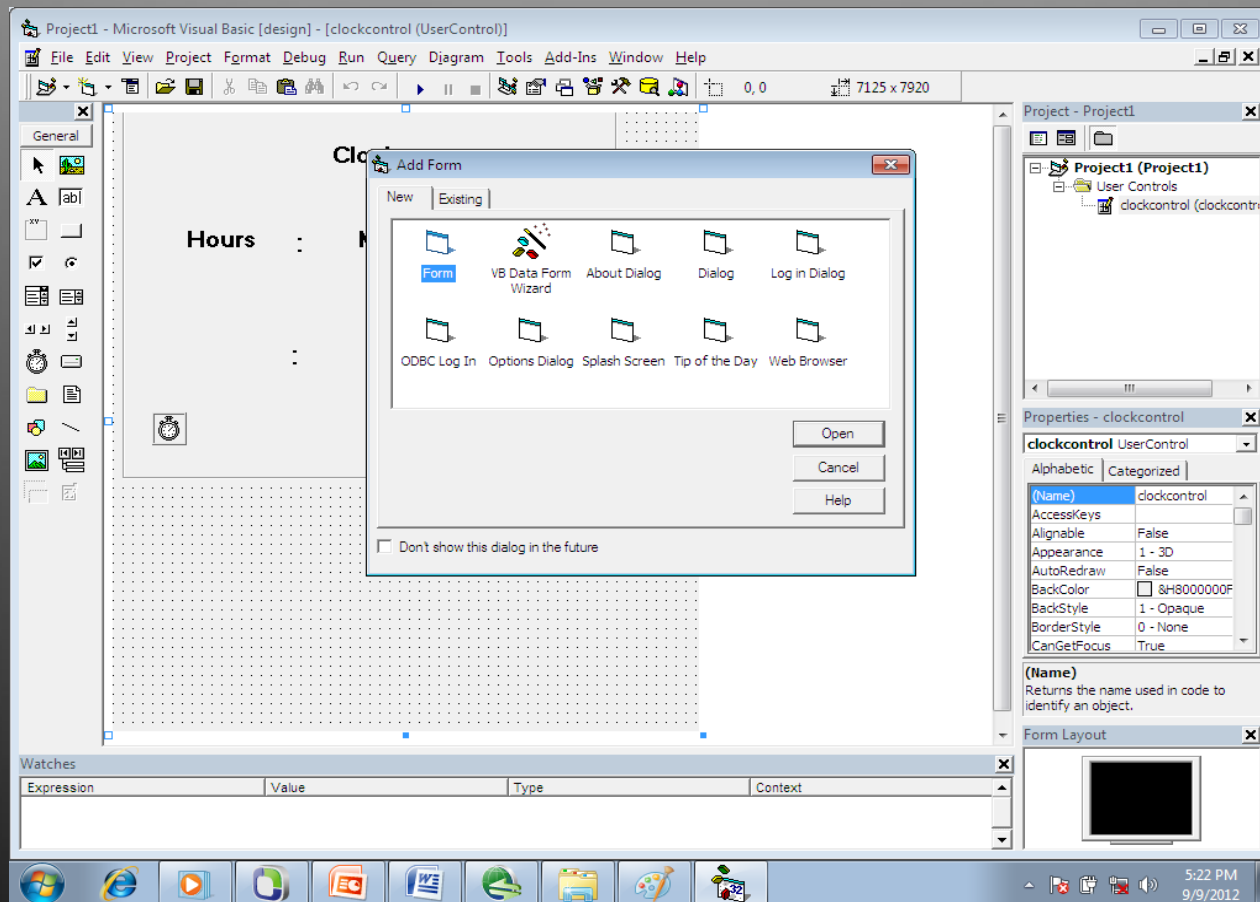

# Clock

- Coding is write on the timer , button & usercontrol button is:
- Private Sub Command1\_Click()
  - Timer1.Enabled = False
- End Sub
- Private Sub Timer1\_Timer()
  - h = Hour(Time)
  - lblhours.Caption = h
  - m = Minute(Time)
  - lblmin.Caption = m
  - s = Second(Time)
  - lblsec.Caption = s
  - End Sub
- Private Sub UserControl\_Initialize()
  - Timer1.Enabled = True
- End Sub

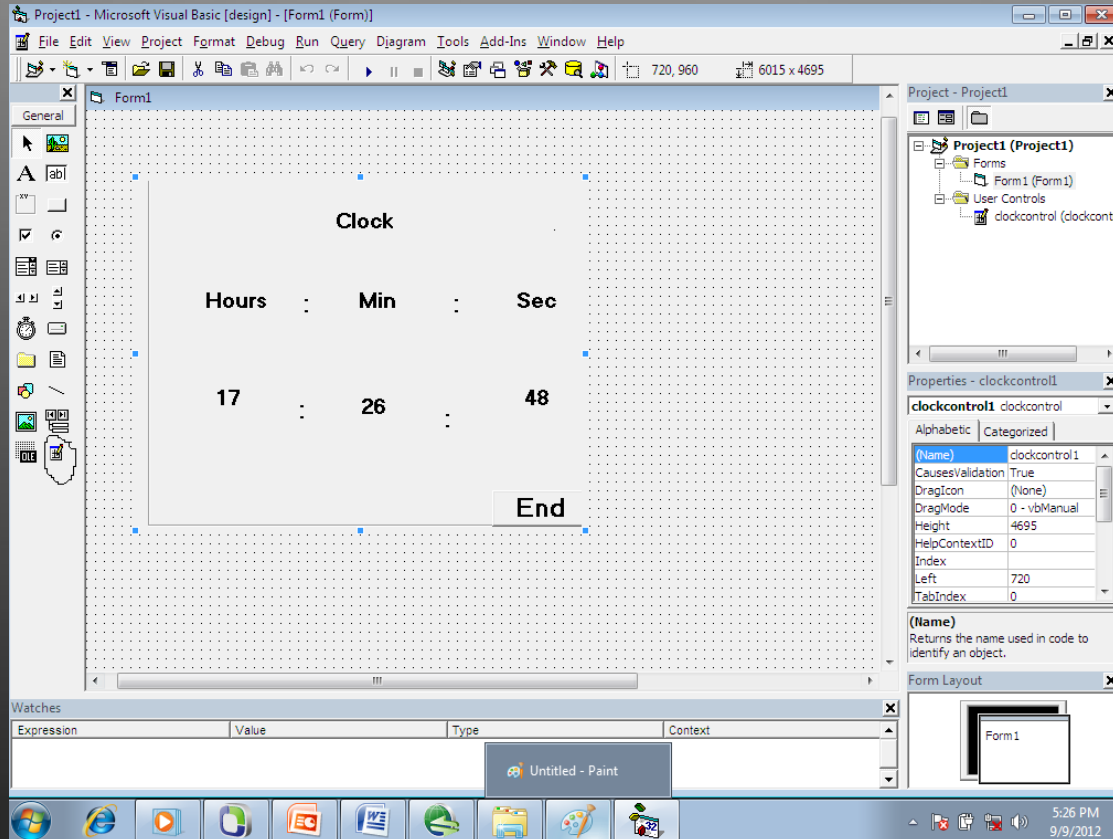

# Clock

- Now add form from project menu.

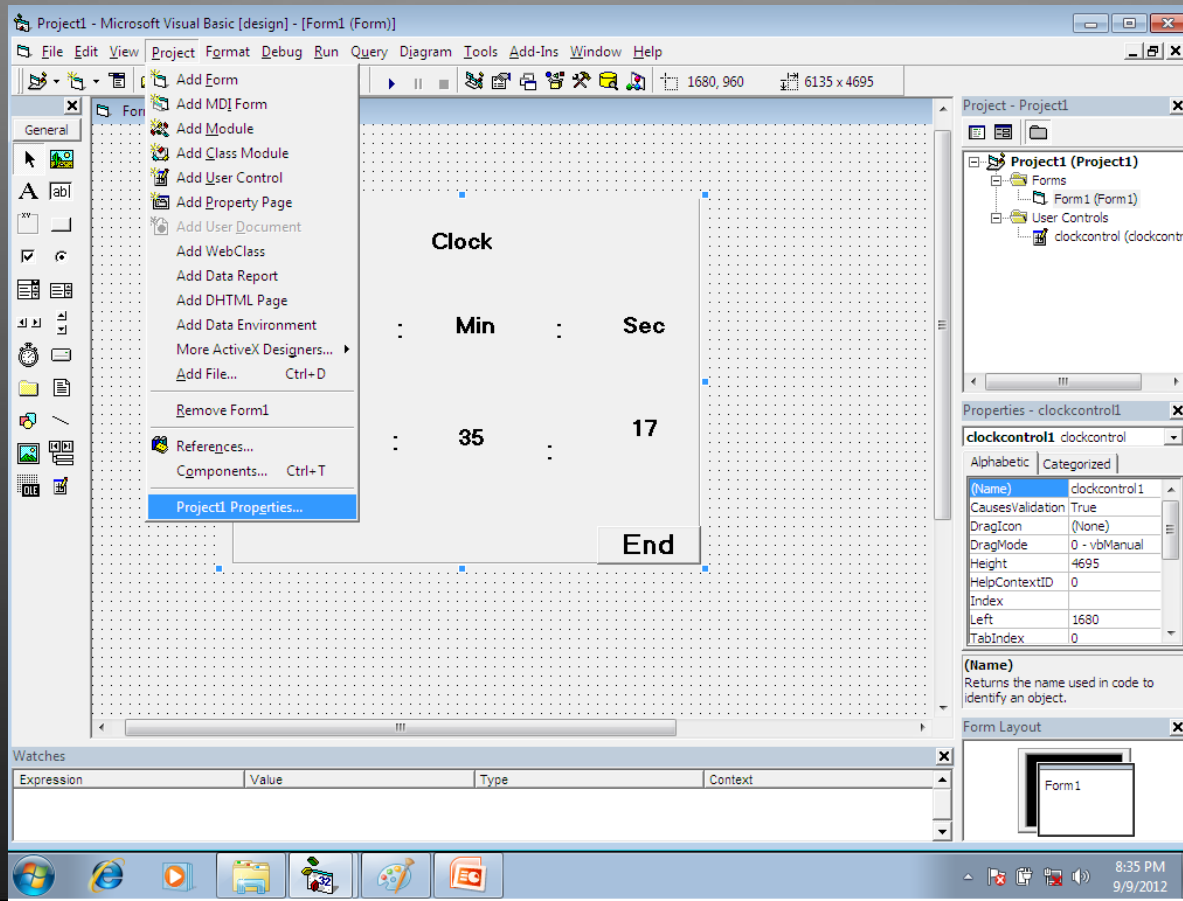

# Clock

- Now clock component is alive in toolbox click on it and drag on the form.

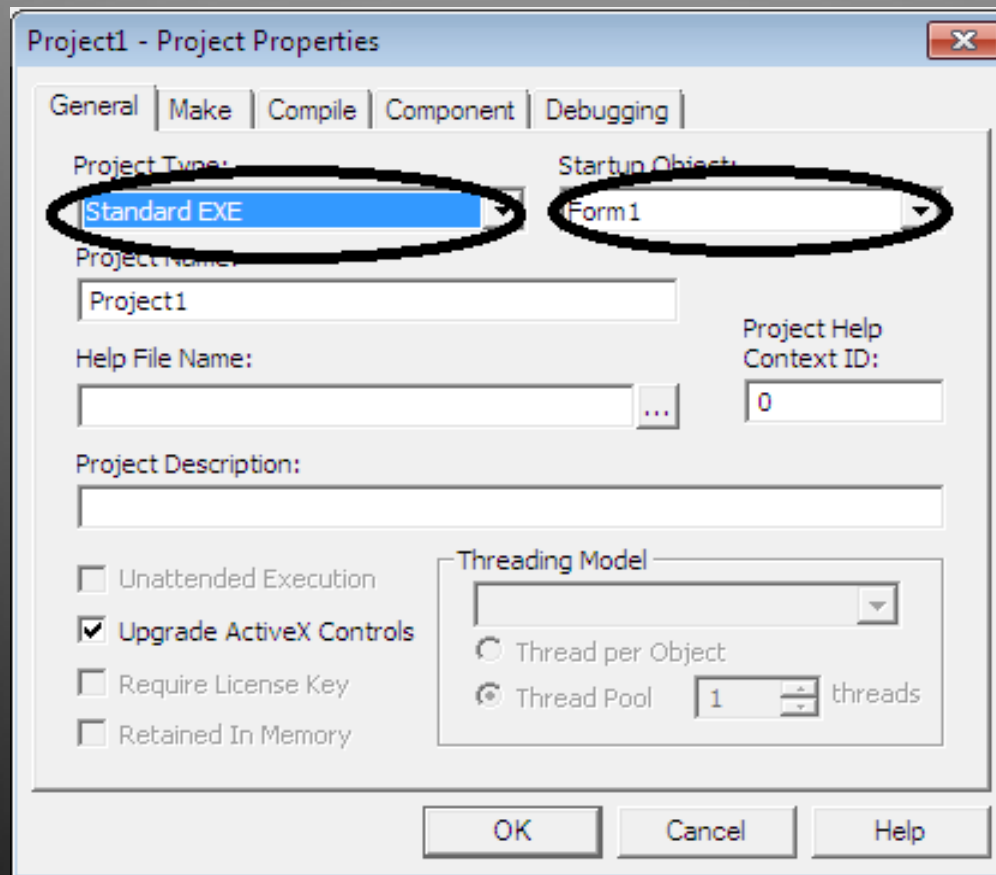

# Clock

- Now we set the property for execution

# Clock

- Select standard EXE from project type form1 from startup project.

# Clock

- Now execute it.
