Linking Information Demand to Supply

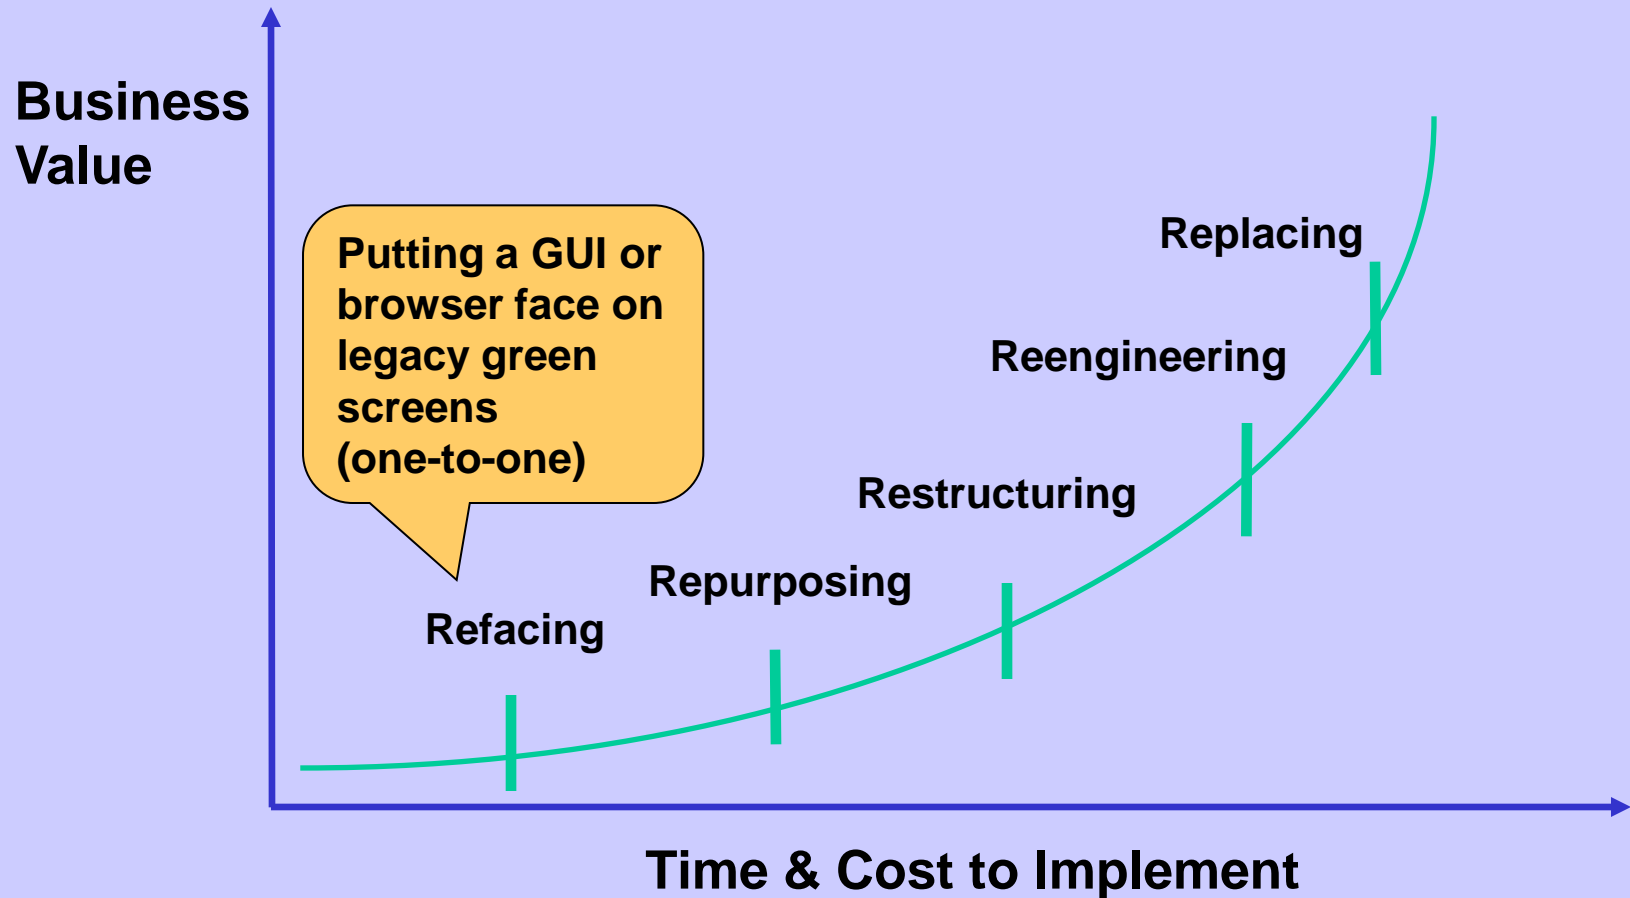

Revisiting Enterprise Applications

Any number of enterprise applications can be extended using any of the five methods at any point in time!

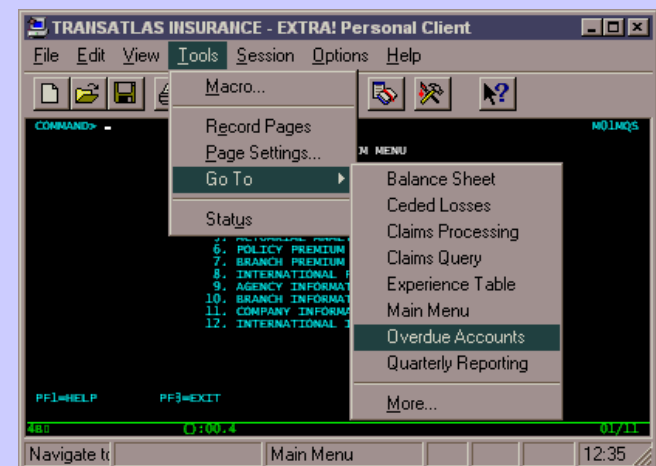

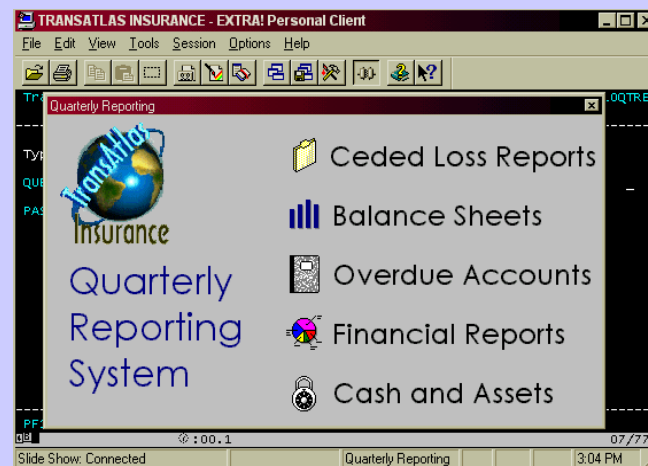

*No change to host code

Refacing Enterprise Applications

Thick Client Refacing

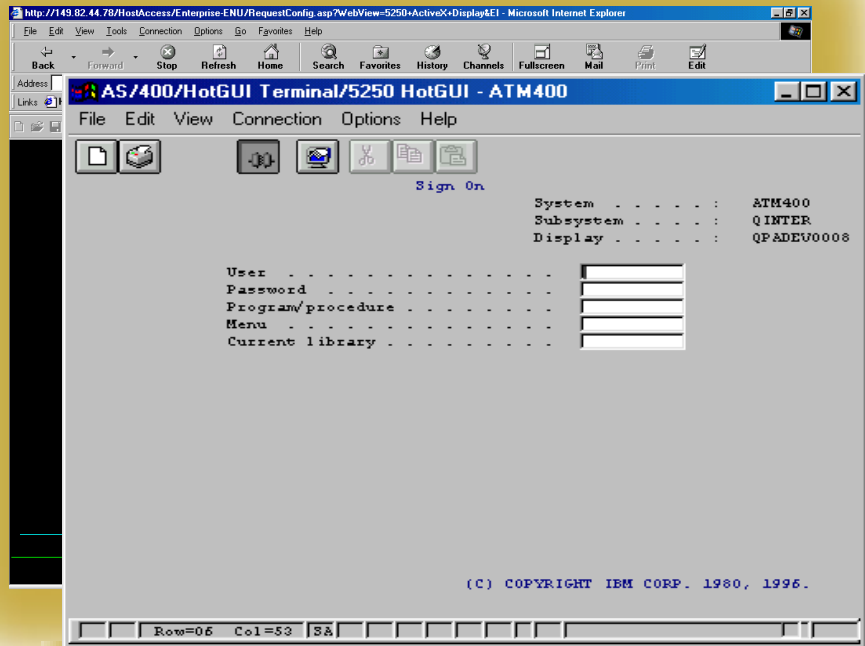

- Emulation enhanced with:
 - Quickpads
 - Navigation
- Perfect for high-use employees
- Advantages:
 - Full features for power users
 - Easy integration with Windows applications
 - Upgrade path to other Refacing products

Refacing Products
EXTRA! Enterprise 2000
EXTRA! Personal Client
INFOConnect

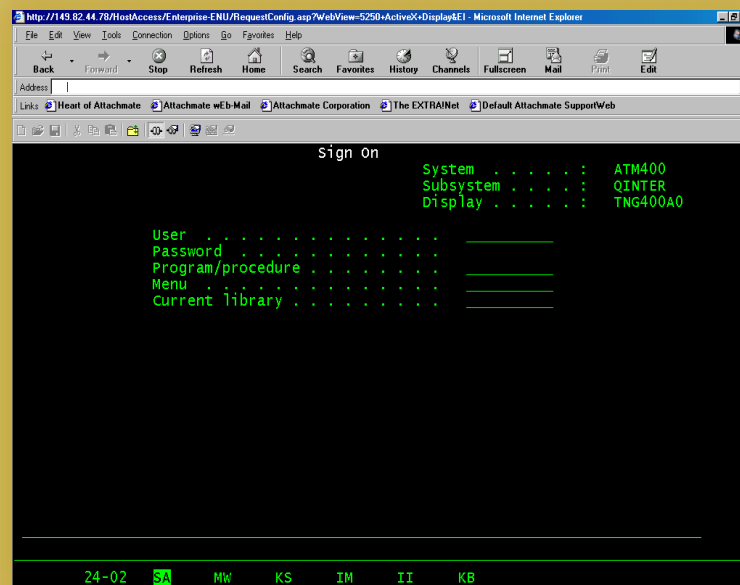

Thin Client Refacing

- Converts host text screen to a mouse-navigated interface (HTML)
- Perfect for low-use employees and business partners
- Users see familiar host screens, but navigate more easily
- Advantages:
 - Speed
 - Accuracy
 - Cost Reduction

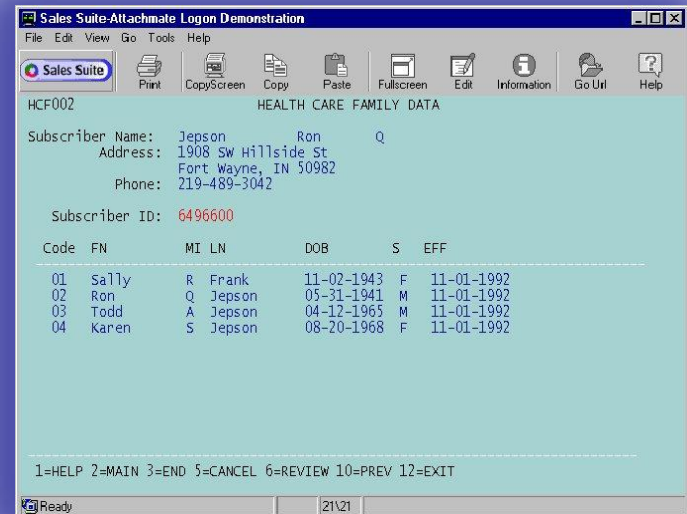

Browser Applet Refacing

- Thin browser applet (Java or ActiveX)
- Perfect for geographically distributed employees
- Deployed in as little as one day
- Distributed & managed from a server
- Advantages:
 - Speed
 - Cost Reduction
 - Deployment
 - Support

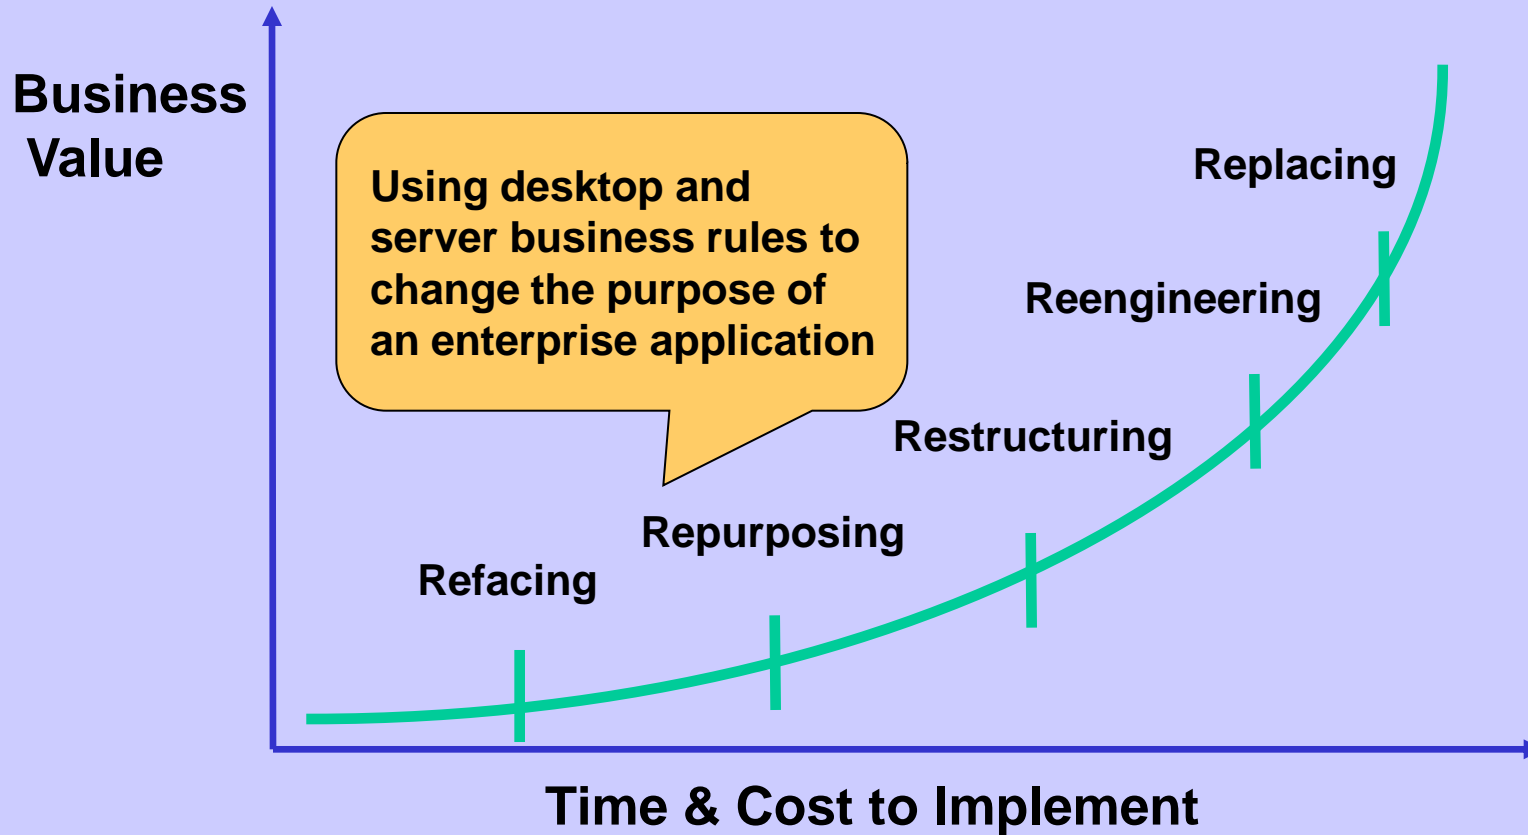

Custom Objects Refacing

- Custom-built with Java or ActiveX objects
- Specific to host application
- Perfect for new or remote employees and business partners
- Easy-to-use with little or no training
- Implemented in 3-5 weeks
- Advantages:
 - Adaptable
 - Customizable
 - Secure

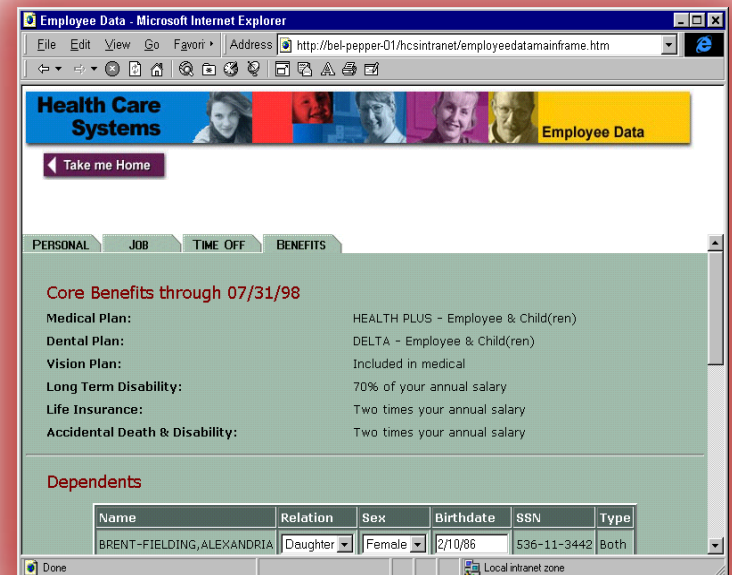

Repurposing Enterprise Applications

Repurposing for employees

- Intranet: direct information access for employees
- Integrates and filters disparate resources
- Server aggregates data (XML, ODBC) and delivers HTML GUI
- Advantages:
 - Speed-up communications
 - Improve efficiencies
 - Easy web interface
 - Data encryption

Repurposing for business partners

- Examples of externalization projects:
 - Filtered information to vendors
 - Order status to sales channels
- Access is secured by logon and password
- Advantages:
 - Strengthened partnerships
 - Faster value chain
 - Reduced labor and costs

Avançar

Debitar Nova Consulta Sair

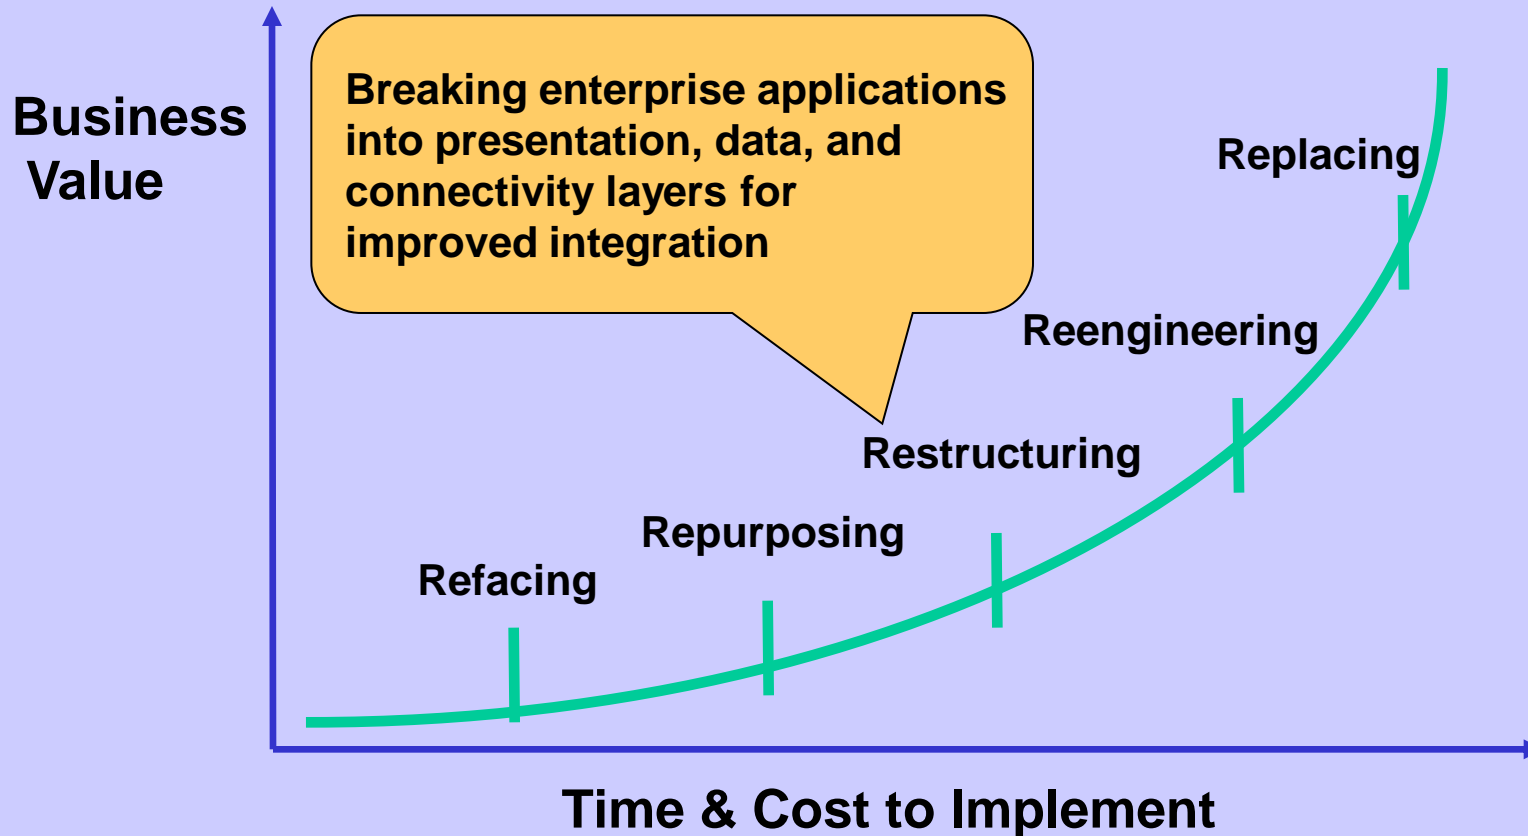

IP 2000 - Investimento Garantido. Rendimento Seguro

Repurposing for customers

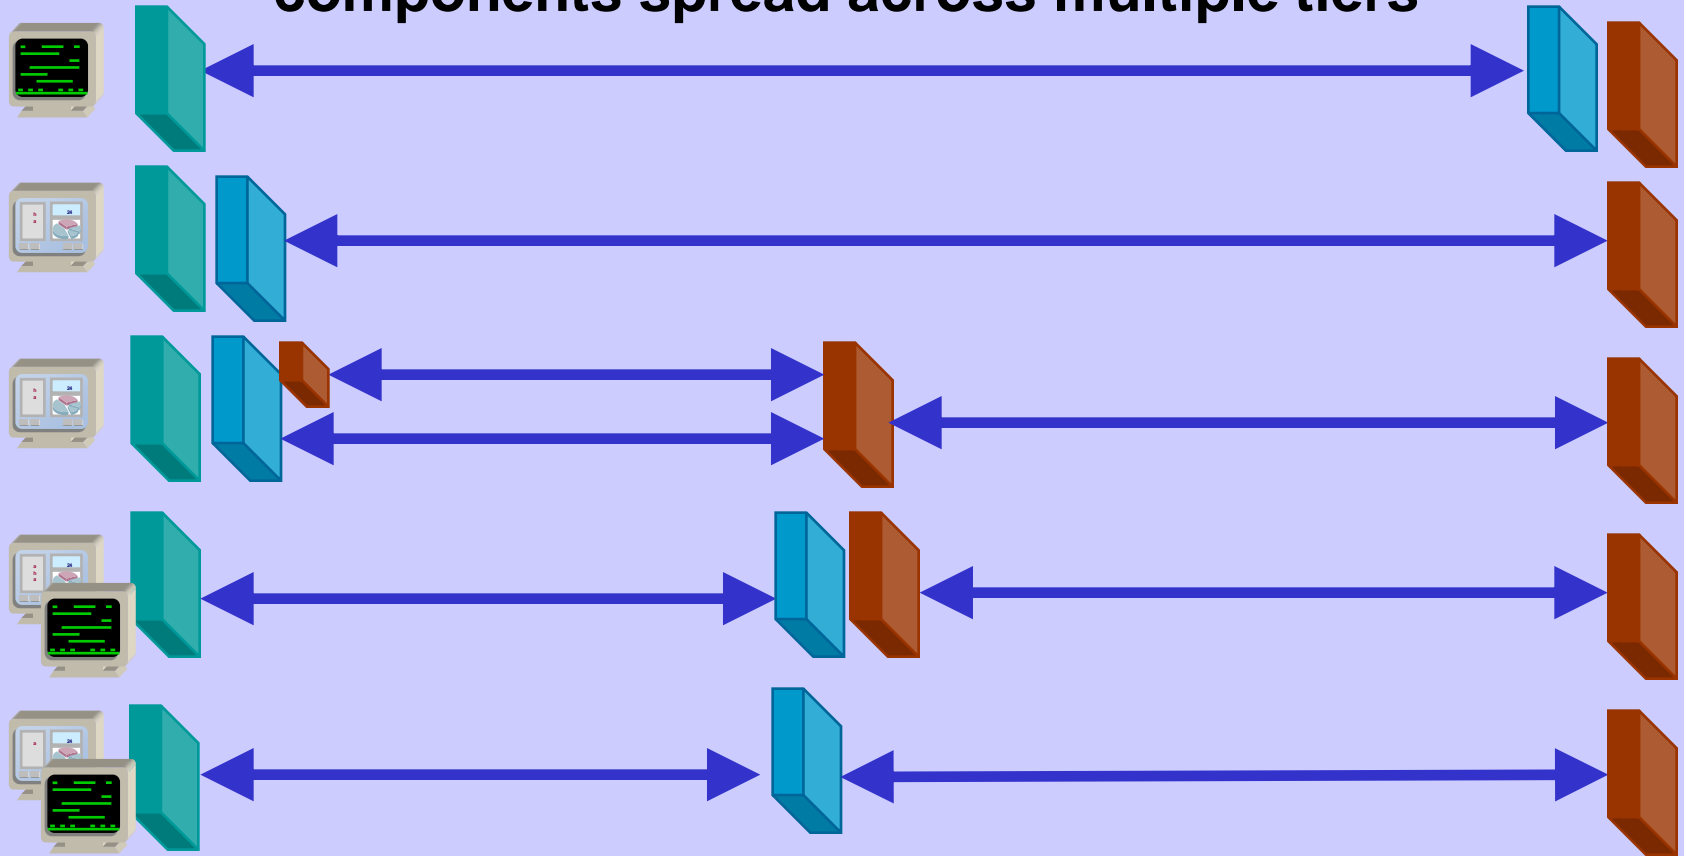

- Create unique web applications for your customers
- Improve service levels by processing online transactions in real time
- Create custom business logic to integrate multiple applications
- Advantages:
 - 24x7 (self) service
 - Cost reduction
 - Efficiencies

Restructuring Enterprise Applications

Architectural model for Restructuring: components spread across multiple tiers

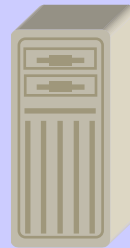

UI/GUI

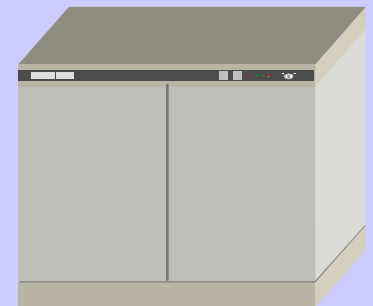

Bus. Logic

Data

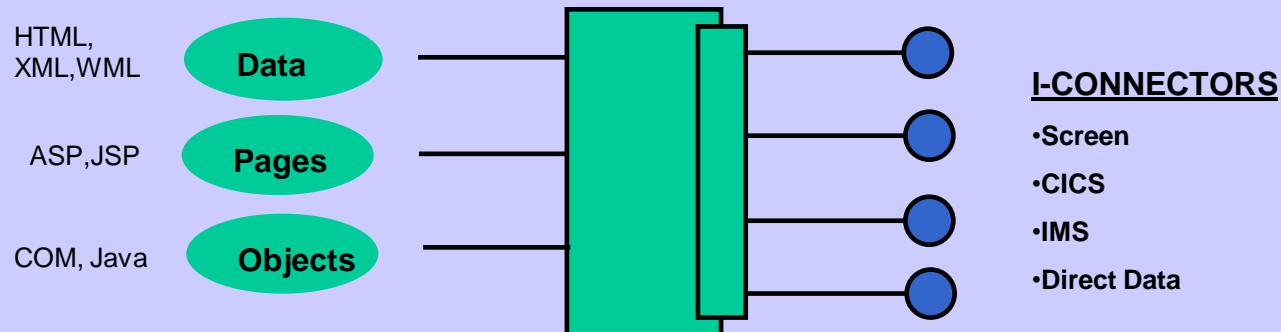

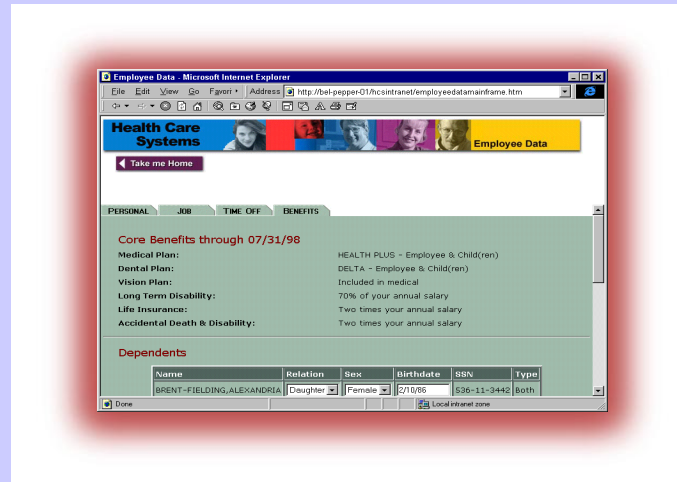

Servers

Hosts

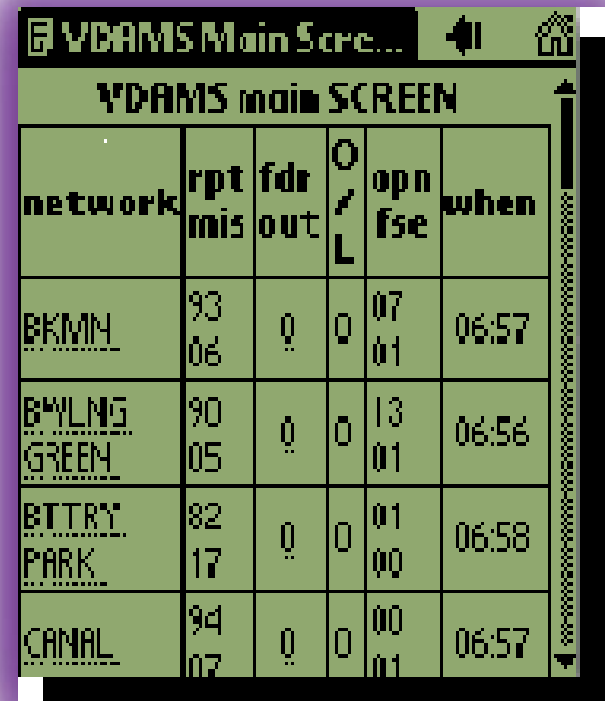

Restructuring via process integration

- Integrate transaction systems using server-based session management
- Customers and partners check orders via the internet
- Use with JD Edwards Order Entry, AS/400 Systems, SAP, Baan, etc.
- Advantages:
 - Cost reduction
 - Speed
 - Mobility
 - Accuracy
 - Security

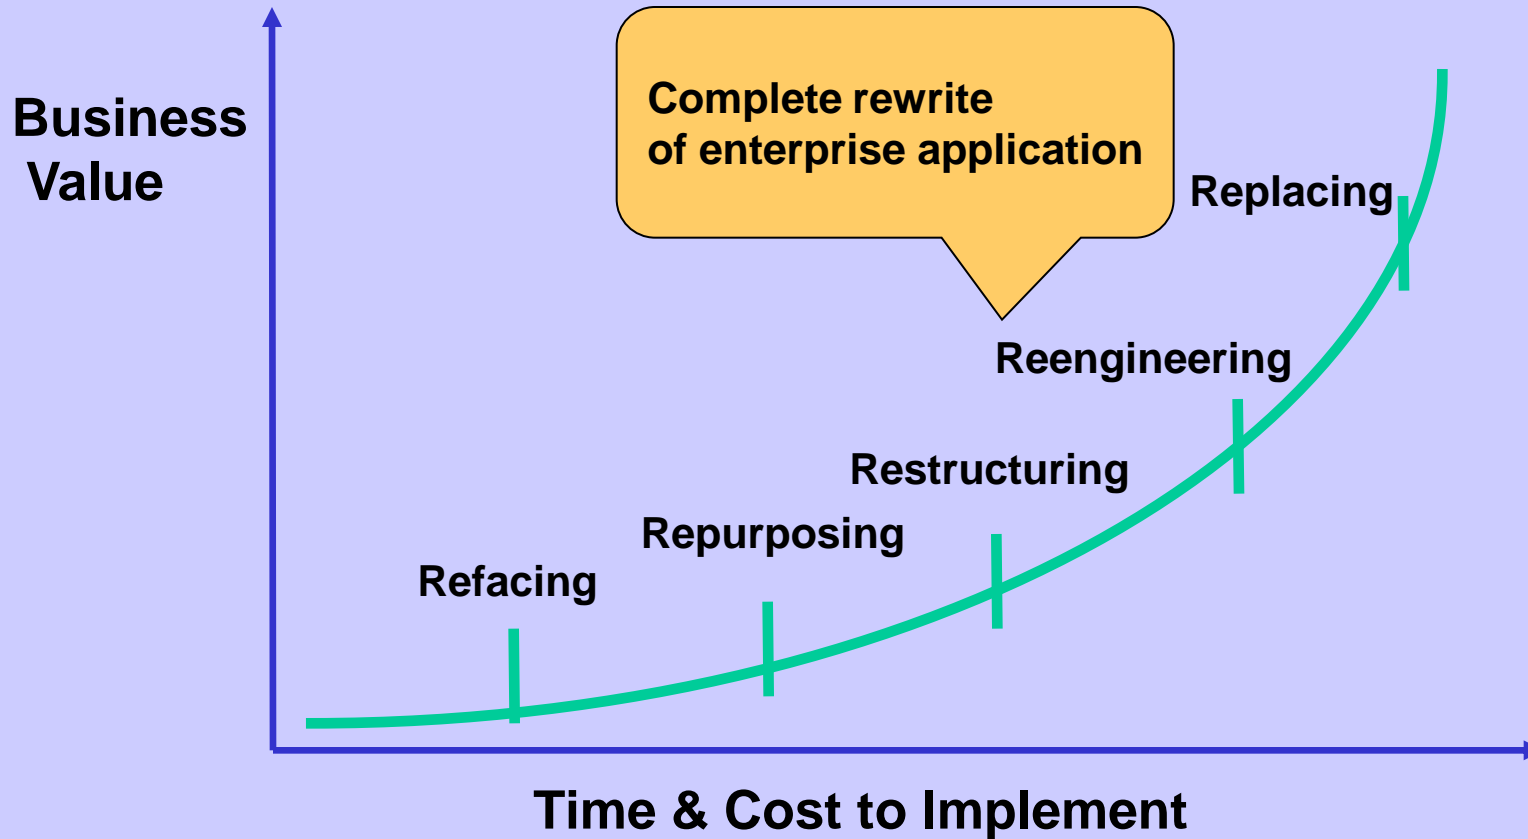

Restructuring via new containers

- Cell phones
 - WAP & WML
- Palm Pilot or Windows CE devices
- Perfect for mobile work force
- Advantages:
 - Speed
 - Higher productivity
 - Cost reduction
 - Mobility
 - Accuracy
 - Security

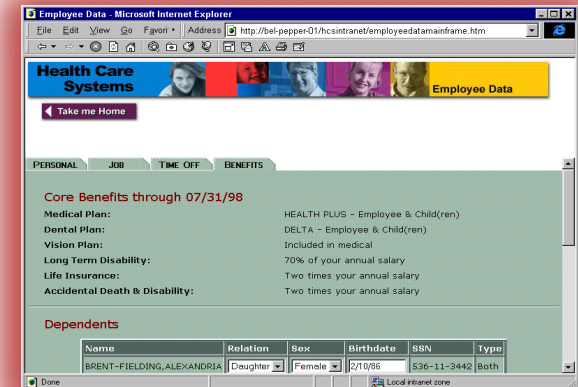

| network | rpt mis | fdr out | O / L | opn fse | when |

Reengineering Enterprise Applications

Reengineering via Enterprise Application Integration

- Middleware wrappering & integration with transactions or other data sources
 - Ex.: XML interfaces between business applications
- Expand applications beyond original design
- Advantages:
 - Integrate business processes (logic)
 - High ROI
 - Old data, new possibilities

HTML,
XML,WML

Data

ASP,JSP

Pages

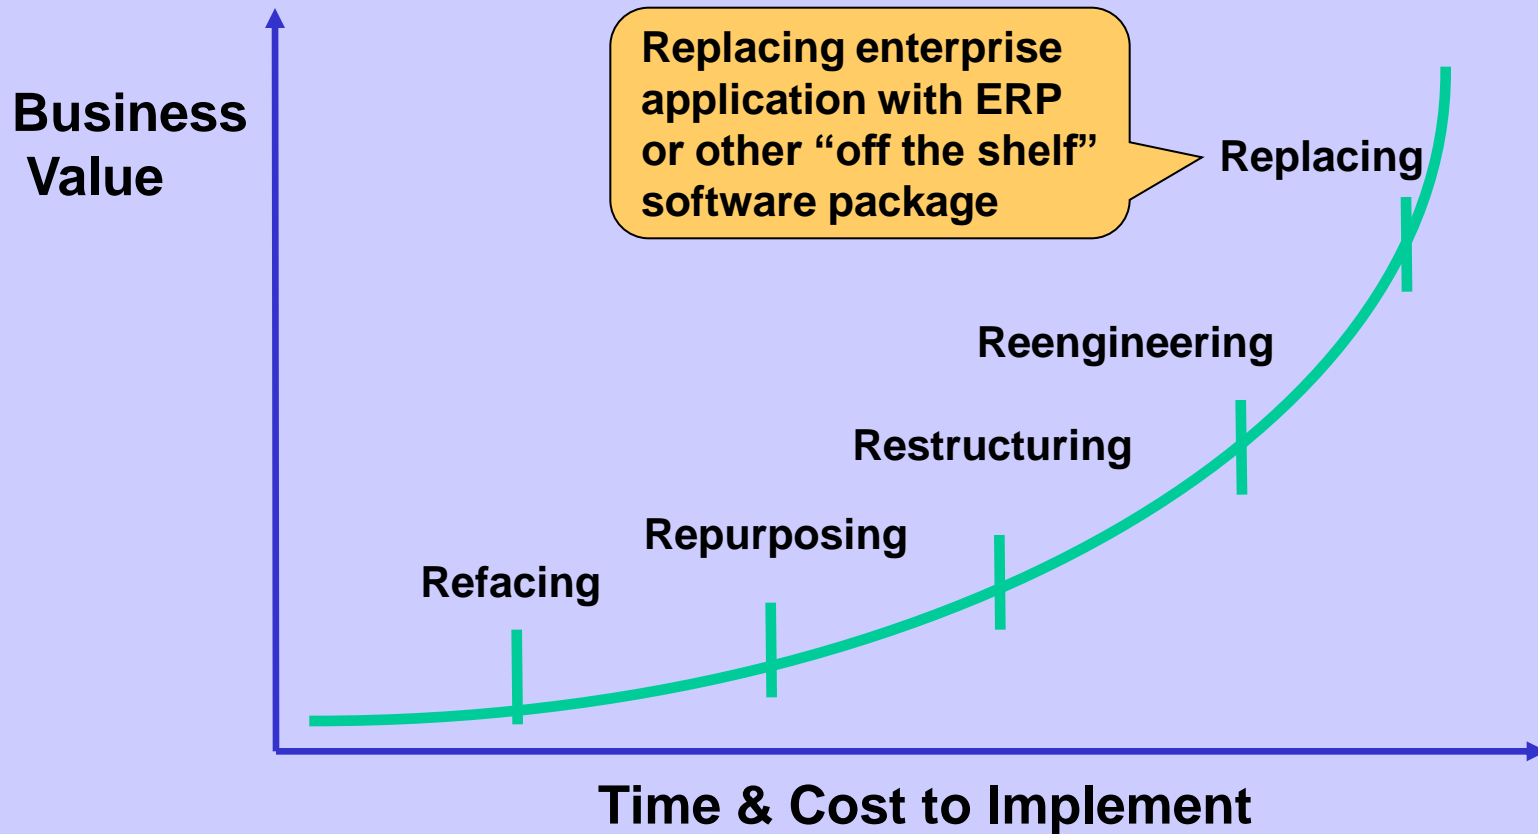

COM, Java

Objects

I-CONNECTORS

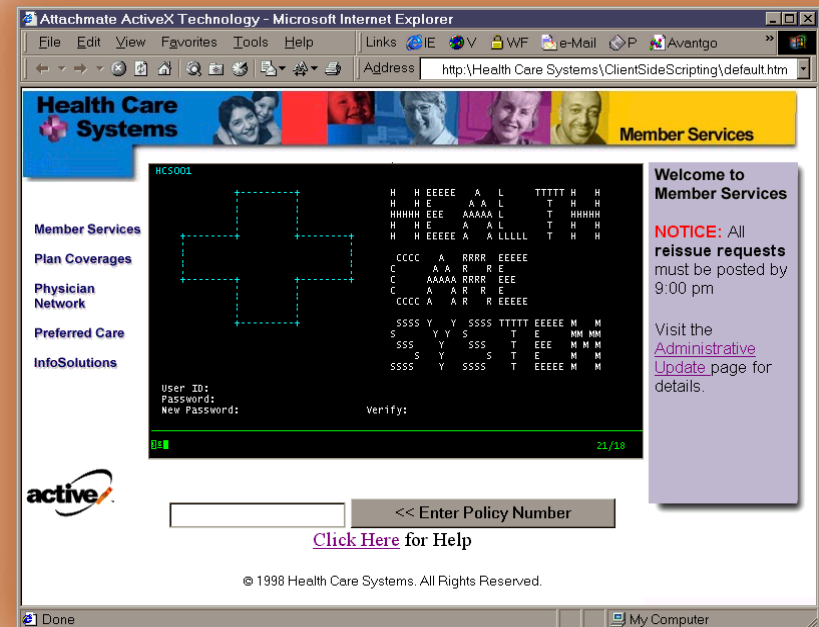

- Screen
- CICS
- IMS
- Direct Data

Replacing Enterprise Applications

Replacing via Enterprise Application Integration

- Legacy apps. combined with other apps., including ERP and CRM
- Client-based integration
- Create extranet or intranet applications
- Advantages:
 - Reusable objects
 - Highly flexible
 - Lower costs
 - Enhances ongoing integration
 - Accommodate merged functions

Replacing via process integration

- Support for HTTP, IBM MQ Series, & Microsoft Message Queue transports
- Support for XML-enabled Intelligent connectors:
 - CICS, IMS, JDBC, Screen (LU2)
 - Data translation & transformation services
- Error handling/logging
- Advantages:
 - Integrate business processes (logic)
 - High ROI
 - Old data, new possibilities
